

the stand-alone garage

**think big
or more correctly
think wholistic - what makes sense doing**

we are living changing times and what we do now will determine our future

**the concept of the "stand-alone garage" is the attempt to give everybody
the right back to live freely in their own safe and healthy home
- the paradigm shift of housing is so to speak in your hands**

**we offer all components and knowhow necessary for
a successful project to become master in your own home
starting with independence of the energy companies**

**the word wholistic has to be taken seriously
any house on this planet is leaving a mark and energetic stamp
in the past the ancients lived in harmony with nature
something we all have to re-learn**

**design your ideal stand-alone garage but rethink the old definition of a garage
as you now have the chance to make the garage building to more
than a place only for cars, bicycles and garden tools**

**with our concept the garage becomes a "technical hub" for all the
needed equipment for living autonomous / off the grid**

**including a workshop or / and an office might be the right thing for you
- a mezzanine is also possible**
